Technical environment : Vuesjs / Base de données / SQL / Laravel permission / Laravel mix / Bootstrap / PHP / Laravel 5.* / Adobe XD / IntelliJ / Trello / Slack / Windows Server 2012

DETAILS OF INTERPERSONAL PROBLEM (Colleague)

Difficulties:

01- Lack of professionalism

After graduating as an engineer, my first professional experience was not always an easy one for me, as I was confronted with many difficulties and among them a sad love affair between colleagues that left me with bad memories.

It was at the very beginning of my career when one of my colleagues made it clear that she had feelings for her. This situation is one of the worst experiences I have ever had in the professional world because I never mix work and feelings or affinities in the sense of falling in love because for me these two things don't work together, especially when you have in front of you a suitor who doesn't have the capacity to separate work and love.

SOLUTIONS:

In order to remain professional and above all to remain productive at work, I made it clear to this colleague who said she had feelings for me that I understood what she was feeling but that it was against my principles of life and I therefore proposed to her to be patient because if it happened that one of us ended up in a structure it would then be possible for me to commit myself to her, but during this time I remained on my decision in all politeness without causing her pain. This situation was very difficult for me because I didn't want to be in my ward with my girlfriend.
